

RECORD YIELDS OF CORN AND POTATOES

Crop of Oats Will Be Near High Mark, According to U. S. Estimates.

HEAVY TOBACCO OUTPUT

Spring Wheat Will Party Make Up for Poor Crop of Winter Variety.

Special Dispatch to THE SUN.
WASHINGTON, Sept. 7.—Record breaking crops of corn and potatoes, with a yield of oats nearly equalling the best previous crop, are promised by the United States Department of Agriculture in its monthly estimate to-day.

The total output of 3,245,000,000 bushels, 1,022,605,000 bushels above any previous year, will be realized in the form of sound corn if frost holds off unusually late. The increased outcome results from big acreage rather than promises of exceptional yield per acre.

The potato crop, largely restricted to September 1, is 1,533,000,000 bushels, with 65,000,000 bushels of the best previous crop in spite of a poor yield in the South and the Northwest.

The 1917 crop of white potatoes is estimated at 462,000,000 bushels, against a crop of 400,000,000 last year.

oat and rye, average of 360,000,000 bushels, the yield is put at 35, 286,000 bushels, tobacco at 1,221,000,000 pounds, and hay at 91,700,000 tons.

Spring wheat promises a yield of 250,000,000 bushels, 14,000,000 more than the last monthly estimate, due to early threshing having shown heavier yields in the West, and the corn crop in the east, South Dakota and Iowa. The poor crop of winter wheat, however, brings the total wheat crop to only 685,000,000 bushels, as against the 1911-15 average of 808,000,000.

The forecast of each crop, final production being larger or smaller than indicated, as conditions before harvest are better or worse, with the final production of each crop to be determined by the five years from 1911 to 1915, stated in million bushels, t. e., 1,000,000 bushels added, follow:

SUGAR IMPORTS NEAR RECORD.

Volume of Heavy Purchases More Than Double Since 1914.

Receipts of sugar into the United States amounted to 7,472,728,006 pounds, valued at \$347,674,625, in the fiscal year ended June 30, 1917, against 7,620,085,000 pounds, valued at \$308,986,793, in 1916, the high record, and 6,822,000,000 pounds, valued at \$274,000,000, in 1914. While the quantity received shows an increase of 9% per cent over 1914, the value increased 124 per cent, the Bureau of Foreign and Domestic Commerce, Department of Commerce, announces.

The total arrivals in 1917, 5,822,745,000 pounds, valued at \$260,945,604, came from foreign countries, 1,182,605,000 pounds, valued at \$62,741,164, and 977,377,998 pounds, valued at \$53,987,767, from Porto Rico. Of the imported, 4,669,097,398 pounds came from Brazil, 1,374,391 pounds from the Dominican Republic, 156,165,461 from South American countries, 287,491,954 pounds from the Philippine Islands, 26,409,773 pounds from the Virgin Islands, 21,855,000 pounds from Japan and lesser amounts from other countries. The United States consumed averages 81 pounds per capita against 78 in 1916 and 89 pounds in 1914. The average price of imported sugar in 1914 was 20 cents a pound, in 1915 3.2 cents, in 1916 3.8 cents and in 1917 4.5 cents.

The production of sugar in the United States for the fiscal year ended June 30, 1917, is estimated at 2,671,251,840 pounds, of which 621,759,360 pounds were cane and 1,040,482,480 pounds beet sugar.
